Weekly Influenza Surveillance Report

Morbidity and Mortality Weekly Report (MMWR) Week 46

November 11 – November 17, 2018

Current Influenza Activity Level: [†]**REGIONAL**

[†] **Regional:** Outbreaks of influenza *or* increases in ILI *and* recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.

***Confirmed:** Influenza laboratory Confirmed Cases are defined by positive molecular virus (RT-PCR) or Virus Culture test results. Those positive test results are reportable in Kentucky. (Positive results for Rapid Influenza Diagnostic Tests are not included in this report).

Influenza-like Illness (ILI) Case Definition:

- Fever ($\geq 100^{\circ}\text{F}$ [37.8°C], oral or equivalent, PLUS Cough
-OR-
- Fever ($\geq 100^{\circ}\text{F}$ [37.8°C], oral or equivalent, PLUS Sore Throat
-OR-
- Fever ($\geq 100^{\circ}\text{F}$ [37.8°C], oral or equivalent, PLUS Cough *and* Sore Throat

Activity Level Range: Sporadic Local Regional Widespread

Update for week 46:		Updated Total 2018-2019 Season:	
Lab Confirmed Influenza:	26 Cases	Lab Confirmed Total:	104 Cases
Number of Regions with Long Term Care Facility Outbreaks:	0 of 17 Regions	Total Number of Long Term Care Facility Outbreaks:	0 Outbreaks
Number of Regions with Confirmed Flu Cases:	7 of 17 Regions	Total Number of Regions with Confirmed Flu Cases:	11 of 17 Regions
Deaths Reported:	0 (under 18 years) 0 (18 years & older)	Total Deaths Reported:	0 (under 18 years) 2 (18 years & older)
Number of Regions with Increased ILI Activity:	5 of 17 Regions	Number of Regions with ILI Activity this Flu Season:	16 of 17 Regions
Number of Regions with Increased Influenza Activity:	2 of 17 Regions		

****All data are preliminary and may change as more delayed reports are received**

November 21, 2018

National Data

2018-2019 Influenza Season

Week 45 ending November 10, 2018

All data are preliminary and may change as more reports are received.

**Week 46 will be available November 29th.*

Synopsis:

Influenza activity in the United States remains low, although small increases in activity were reported. Influenza A(H1N1)pdm09, influenza A(H3N2), and influenza B viruses continue to co-circulate, with influenza A(H1N1)pdm09 viruses reported most commonly by public health laboratories since September 30, 2018. Below is a summary of the key influenza indicators for the week ending November 10, 2018:

- **Viral Surveillance:** Influenza A viruses have predominated in the United States since the beginning of July. The percentage of respiratory specimens testing positive for influenza in clinical laboratories was low.
 - **Virus Characterization:** The majority of influenza viruses characterized antigenically and genetically are similar to the cell-grown reference viruses representing the 2018–2019 Northern Hemisphere influenza vaccine viruses.
 - **Antiviral Resistance:** All viruses tested since late May show susceptibility to the antiviral drugs oseltamivir, zanamivir, and peramivir.
- **Influenza-like Illness Surveillance:** The proportion of outpatient visits for influenza-like illness (ILI) increased slightly to 1.9%, which is below the national baseline of 2.2%. One of 10 regions reported ILI at or above their region-specific baseline level.
 - **ILI State Activity Indicator Map:** One state experienced moderate ILI activity, New York City and five states experienced low ILI activity; and the District of Columbia, Puerto Rico and 44 states experienced minimal ILI activity.
- **Geographic Spread of Influenza:** The geographic spread of influenza in three states was reported as regional; Guam and 10 states reported local activity; the District of Columbia, Puerto Rico, the U.S. Virgin Islands and 35 states reported sporadic activity; and two states reported no activity.
- **Pneumonia and Influenza Mortality:** The proportion of deaths attributed to pneumonia and influenza (P&I) was below the system-specific epidemic threshold in the National Center for Health Statistics (NCHS) Mortality Surveillance System.
- **Influenza-associated Pediatric Deaths:** No influenza-associated pediatric deaths were reported to CDC for week 45.
